

CONRAN AUDIO

Speaker Dock for iPod & iPhone

"The Conran Audio iPod dock, designed by Studio Conran, combines seriously stunning acoustics with an elegant design aesthetic. The sound is beautifully engineered by Q Acoustics and we hope we have created a contemporary design classic. It is a dedicated 100% pure iPod player that works both docked and wirelessly with iPhones and iPods, and wirelessly with iPads. Bluetooth™ connectivity allows song selection from the comfort of an armchair or, if it's your thing, while dancing around the room."

Terence Conran

Sir Terence Conran

Conran Audio – a new brand with a great heritage

Conran Audio is a completely new brand, so how can it have a great heritage? The answer is because its design team have decades of experience and a proven record of innovation and success.

Great design is difficult to define, but when you see it, you instinctively know something is right. A creation of Studio Conran, this new speaker dock is just such a product, combining an elegant design aesthetic with a stunning audio performance engineered by Q Acoustics.

Its appearance achieves the seemingly conflicting goals of both harmonising with any décor, whilst simultaneously projecting just the right amount of individual design flair to make you smile every time it catches your eye.

The new Conran dock, is available in both white and black finishes.

Q Acoustics' influence is obvious from the first musical note. The Conran dock's outstanding clarity, dynamic range and naturalness of sound being the hallmarks of Q Acoustics' many award winning models.

Ready for 'apt-X' quality Bluetooth Stereo

In addition to its ability to play music from physically docked iPods and iPhones, the Conran dock can also play 'wireless audio'. You can wirelessly stream music to the dock from your iPhone, iPod touch, iPad or MacBook as well as other Bluetooth™ compatible smart phones, laptops and tablets.

Furthermore, the Conran dock's in-built Bluetooth™ receiver chip is compatible with 'apt-X', the new high-performance audio coding technology which transmits CD-quality full-bandwidth stereo over Bluetooth™ connections. 'apt-X' is fast becoming the next 'must have' technology feature in high-end consumer audio devices with pre-installed or dongle-enabled Bluetooth™ Stereo capability.

When not in use, the elegant remote fits snugly into the side of the dock.

Rotate any way you want

To enable users to view menus as they wish, the dock assembly rotates, allowing iPhones and iPod touches to be docked in either vertical or horizontal mode.

The dock boasts six preset audio equalisation settings to optimise its performance for different types and sizes of rooms. These are user selectable via the remote control. Naturally, other music sources with audio output sockets, such as radios, CD and MP3 players, can also be enjoyed through the Conran dock via its 3.5mm auxiliary input.

Speaker dock features:

- Class leading audio performance, engineered by the award winning Q Acoustics design team
- Optimised sound settings for different room types
- Stream music wirelessly from iPhone, iPod touch, iPad and Bluetooth™ enabled smart phones, tablets and laptops
- New 'apt-X' Bluetooth™ streaming technology for optimum quality sound from 'apt-X' compatible devices
- Dock rotates to allow both horizontal and vertical operation to enhance menu visibility
- Remote control locates in the side of the dock
- Auxiliary input to connect other music sources

Speaker dock specifications:

Frequency response:	75Hz - 20KHz
Loudspeaker Drivers:	2 x 75mm bass/mid 2 x 25mm tweeters
Power output:	2 x 15 Watts
Bluetooth	Stereo (A2DP) + apt-X
Standby power consumption:	< 1 Watt
Dimensions (WxDxH):	283mm x 120mm x 233mm
